“We have always believed that employees are, in fact, the company’s shareholders: they form its foundation and influence its destiny. Therefore, we consider them part of our LIPOELASTIC family; a family with a global reach.”

*Alena and Tomáš Hradil,
founders of LIPOELASTIC a.s.*

THE STORY OF LIPOELASTIC

We are LIPOELASTIC a.s., a Czech family company founded in 2002 by Alena and Tomáš Hradil.

From a small company with 15 employees, we have developed into one of the world's leading manufacturers of post-operative compression garments.

Today, more than 20 years later, our company has over 220 employees, and we continue to grow. Thanks to the work ethic of our dynamic team, we are currently exporting to more than 75 countries, and we are among the leading providers of compression garments in the world.

Present since

2002

ON THE MARKET

Wide portfolio of

100

PRODUCTS

Export to

75

COUNTRIES

BENEFITS

R&D Department

Despite the success of our products, we continue to look for new ways to improve. Our R&D department works hard to constantly innovate and develop our products, and make the whole team's work even better. Thanks to our cooperation with the best surgeons worldwide, we keep improving our garments to enable a perfect fit and maximum comfort. The greatest reward for us is a satisfied patient.

Modern Technologies

We constantly innovate and use the most modern technological procedures in our production. For example, ultrasonic and hemming technologies enable the joining of textiles by welding and gluing, making our products highly durable and less prone to rip.

Our Certifications

Quality and safety are our top priorities. Our products meet all the qualitative and material standards incorporated in the following certifications:

OEKO-TEX® STANDARD 100

LIPOELASTIC® products are awarded the OEKO-TEX® STANDARD 100 certificate, 02.0.8039 Hohenstein HTTI, which guarantees the absence of harmful and is therefore harmless for human health.

ISO 13485 Certification

LIPOELASTIC® products are manufactured in a facility whose quality management system is certified by the ISO 13485 standard (ČSN EN ISO 13485: 2016).

Declaration of Conformity

LIPOELASTIC® products are in conformity with the current EU legal regulations concerning medical devices and hold the CE marking.

Transportation of Sweat

Optimal values of sweat transfer in fabrics are considered to be in the range of 800 – 900 g/m²h. The LIPOELASTIC® materials reach values of up to 815 g/m²h.

Moisture Removal

Tests performed by the Czech Textile Testing Institute have proven the moisture removal and breathability of LIPOELASTIC materials.

BENEFITS

The Precision of Our Products

We do not compromise when it comes to quality of our products. All LIPOELASTIC® garments are handmade by our team of experienced sewists, and each post-operative garment is inspected in detail before dispatch from our factory.

Exclusive Materials

Materials for our products are carefully selected to meet our quality standards. We exclusively buy the materials of the highest quality and only from our trusted suppliers in the European Union.

Flat Seams

The comfort of LIPOELASTIC® post-operative compression garments is determined by small details that can make all the difference. One of these would be our unique flat seams technology ensuring maximum comfort.

Seamless Moulded Cups

The breasts are very sensitive after plastic surgery. We shape the cups of most of our bras by heat to prevent seams in sensitive areas.

Cotton Bras

Cotton is a natural and breathable material. For the production of some of our post-operative bras, we have chosen a material with a high percentage of cotton to provide patients with the greatest comfort and best post-operative care.

Textile Label

Placing the label on the outside of the garment prevents unpleasant scratching. The textile labels are also colour-matched to the colour of the garment.

Made-to-Measure

We understand that every patient is unique and has different needs. Therefore, at LIPOELASTIC, we also manufacture made-to-measure garments based on a request from the patient's surgeon.

Less Packaging

Join our journey towards sustainability by implementing new storage solutions and reduced packaging options.

COMPRESSION THERAPY

Compression therapy is an essential part of the recovery process following most plastic and aesthetic procedures. The application of compression pressure promotes the circulation of bodily fluids, effectively reducing their accumulation in the surgical area.*

Wearing LIPOELASTIC® compression garments after plastic surgery enhances patients' comfort during their recovery. We place high standards on the design and testing of the input parameters of our materials to achieve the recommended compression.

HOW TO MEASURE CORRECTLY?

Choosing the right-sized postoperative garments is necessary to achieve the right compression level. Therefore, it is essential to pay extra attention while measuring the required body parts.

- 1** *For the best results, it is recommended to always measure naked. Stand upright with a relaxed belly, and breathe naturally.*
- 2** *The measuring tape must be in a horizontal position. It should not point downwards or upwards to ensure that the measurement is not distorted.*
- 3** *When taking the measurements, the measuring tape should not be too tight or too loose. It should come to contact with the body only lightly.*
- 4** *Write down the measured values, and then re-measure to double-check for accuracy.*
- 5** *Using your measurements, choose the correct size of the garment in line with the product size chart.*

Are You In Between Two Sizes?

If you find that your measured size is in between two sizes in the product charts, we always recommend that you choose the smaller size to ensure sufficient compression. In cases where the size cannot be determined exactly, we offer the option of custom-made products. Custom-made production is only possible with compression garments.

Our TIP: Garments with Variant fastening (with 3 rows of hooks and eyes) can be adjusted as any post-operative swelling reduces.

HOW DO I MEASURE MYSELF?

Please measure the chest circumference for male garments.

HOW WE DEFINE V AND T GARMENTS?

LIPOELASTIC® compression garments are named according to the letters corresponding with a particular body part.

V type garments

Starting point is under bust

T type garments

Starting point is waistline

From the indicated points **V** and **T**, we determine the starting point of the garment. The length of the garment is indicated by points **H** to **B**.

The diagram on the right highlights our **VB** garment. As you can see, point **V** marks the starting point of the garment, and point **B** marks the finish.

TIP: We recommend opting for a garment which is almost 10 - 15 cm below the treated area to avoid any possibilities of excessive swelling.

NAME EXAMPLES OF OUR GARMENTS WITH TROUSERS

TYPES OF FASTENING

- 1

COMFORT

Zip fastening supported with a row of hooks and eyes to ensure easy and hassle-free use immediately after the procedure.
- 2

VARIANT

Adjustable fastening with 3 rows of hooks and eyes enables regulation of size and degree of compression as post-operative swelling reduces.
- 3

WITHOUT zipper

TYPES OF FINISHING

Hemming

The hemming technology enables joining of textiles by gluing. An elegant hemming finish fully replaces the elastic band while maintaining its compression and elasticity.

Ultrasonic

Ultrasonic technology enables joining of textiles by welding. Finishing with this technology is very durable and the fabric is less prone to tear.

Lace

Contemporary lace without a silicone tape does not cut into the legs, is sufficiently fixed in the area and does not roll up.

Clean-cut

Certain types of garments are finished only with a clean-cut preventing the garment from rolling up or pressing in any way.

TYPES OF HYGIENE OPENING FOR WOMEN

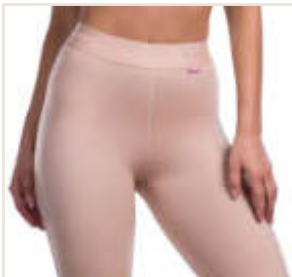

Open crotch

Female garments with pants have an open crotch for greater comfort and accessibility.

Adjustable hygiene opening

Female garments without pants have a hygiene opening with three adjustable rows of hooks and eyes.

Without hygiene opening

Leggings are made without a hygiene opening.

TYPES OF HYGIENE OPENING FOR MEN

Hygiene opening - crotch

Male panty garments without pants have a high cotton content in the crotch area for maximum comfort.

Open crotch

Male trouser garments have an open crotch for better accessibility.

For maximum comfort of sensitive areas after plastic surgery, some LIPOELASTIC® garments are reinforced with a double padding in the abdomen or thigh areas.

PI premium

LIPO-PI20V00X

Use: Fashionable bra PI premium is specifically designed for women who have already finished their post-operative recovery period after breast implants operation.*

** The length of post-operative care is decided individually by a surgeon. PI premium bra is suitable straight after the recovery is finished.*

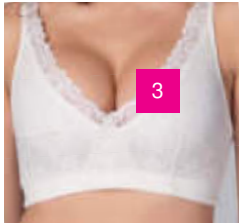

PI premium is not a Medical device.

Colors:  

Product description:

- 1** straps with an adjustable buckle
- 2** closing on the back as normal bra
- 3** elegant design with lace and golden accessories – nickel-free
- 4** heat moulded seamless cups

WHEN ELEGANCE MEETS COMPRESSION

„Based on my own experience after augmentation, I know that buying an elegant bra that keeps my new breasts safe is a challenging task. PI premium has all that every woman expects from a bra. It is elegant and comfortable, and thanks to its compression, also helps to fix implants in the right place. I'm very proud of our PI premium, and I'm looking forward to your feedback.“
