REVANESSE®

By PROLLENIUM®

Clean filler. Clear outcomes.

Revanesse® HA injectables are developed and manufactured in Ontario, Canada, making Prolenium® the first manufacturer of HA injectables in North America. Inspired by thixotropy—the ability of gels to flow under stress and return to a solid state at rest—our scientists developed a breakthrough mixing technology that optimizes the cross-linking of hyaluronic acid, resulting in a stable, longer-lasting gel.

Thixofix technology: 3 steps to safer, longer-lasting HA injectables.

- 1 High Molecular Weight, Low BDDE:** High Molecular Weight (HMW) closely resembles the body's own HA, needing less BDDE to stabilize. As a result, Revanesse® is less likely to be recognized as a foreign body by the immune system.¹
- 2 Round Particle Formation:** A proprietary wet-milling process creates smooth and round particles, resulting in enhanced flow, predictability, and adaptability across various treatment areas.²
- 3 Weeklong Purification Process:** Through a 7-day dialysis, we remove residual BDDE and toxins, creating a purer product with a neutralized pH and balanced osmolality. This step ensures that what you see is what you get.³

Revise+

Refined precision
for delicate areas

TREAT:

→ Delicate areas

Revanesse® Revise™+ is an HA injectable designed to treat delicate areas and superficial lines, delivering a refreshed appearance with minimal downtime.

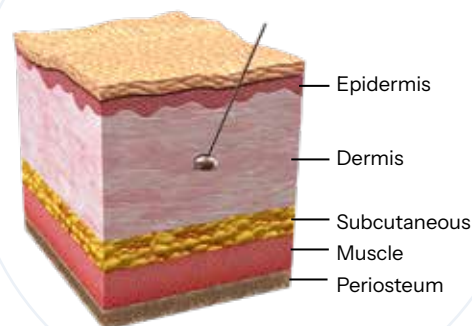

Natural looking outcomes

Specifically designed for delicate areas, Revise™+ features a soft, malleable gel with low viscosity and optimal shape retention, allowing seamless integration into thin, superficial tissue. Its uniquely low swelling ratio supports natural-looking outcomes, while low extrusion force enables smooth, controlled injection—enhancing precision and safety in sensitive areas.

Subtle, predictable correction

Formulated with high-molecular-weight hyaluronic acid and a low HA concentration (12 mg/mL), Revise™+ delivers subtle, predictable correction with excellent tissue tolerance, making it the ideal choice when softness, minimal swelling, and control matter most.

Superficial
to mid-dermis

Kiss+

The benchmark
for lip hydration.

TREAT:

→ Lips

→ Perioral lines

Revanesse® Kiss™+ is an HA injectable for the lips to restore lost volume and create a fuller, natural-looking lip.

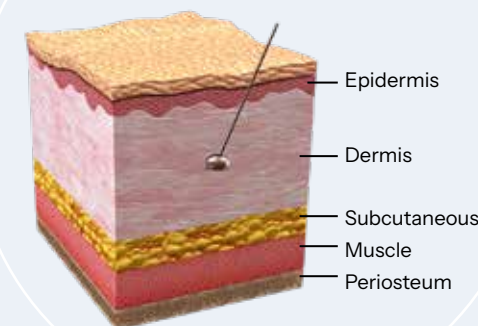

Soft, not stiff

A low elasticity (G') delivers less stiffness to create the softness required for lips.

Dynamic and even

Kiss™+ features low-to-moderate yield stress and optimized cohesivity, giving it the moldability needed for natural, dynamic lip movement while also allowing it to integrate smoothly into the perioral matrix to form even, well-adapted layers.

Superficial
to mid-dermis

Ultra™+

Ultra versatile,
ultra effective.

TREAT:

- Submalar areas
- Nasolabial folds
- Marionette lines
- Lips
- Oral commissures

Correct volume loss, enhance lip volume, and smooth mid to deep lines and wrinkles to deliver a fresh, youthful appearance.

Designed to provide subtle results with moderate elasticity (G'), Ultra™+ strikes a beautiful balance between softness and stiffness. Moderate yield stress and optimal cohesivity also offer a level approach between moldability and shape retention—as needed for dynamic movement and smooth integration into the tight dermal matrix for ideal mid-face volume.

Less pain

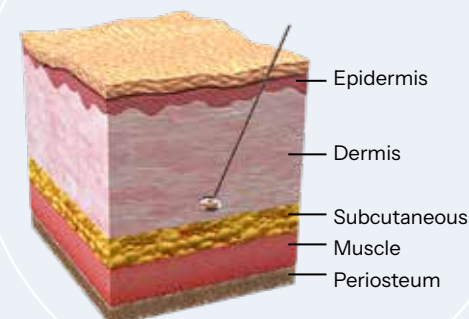

In a clinical trial, 74% more patients reported injection site pain after their treatment with a comparable product than with Revanesse® Ultra™+.¹

Less swelling

In a clinical trial, 51% more patients treated with a comparable product experienced swelling versus patients who were treated with Revanesse® Ultra™+.¹

Mid to deep dermis

Outline™+

Subtle structure,
by design.

TREAT:

- Vermillion border
- Philtral column
- Lips

Revanesse® Outline™+ is a high viscosity HA gel optimized with Thixofix® cross-linking technology for medium to deep facial rhytides. Smooth and viscous, Outline™+ is rheologically designed to both create defined vermilion borders and vertical lift, while soft enough for correcting deep tissue areas.

Upgraded outlook

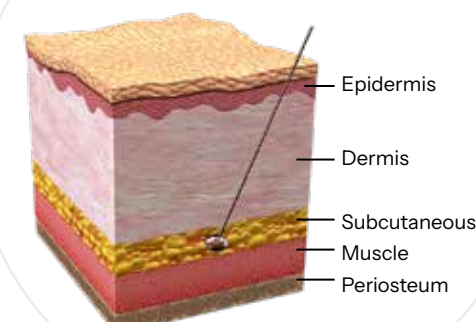

Revanesse® Outline™+ contains greater HA concentration than comparators.¹

Minimal inflammation

Revanesse® Outline™+ is specially formulated to minimize natural inflammatory responses, such as pain and swelling.

Deep dermis to subcutaneous

Contour™+

It takes expertise
to deliver invisible.

TREAT:

- Cheeks
- Temples

Revanesse® Contour™+ is a high viscosity HA gel optimized with Thixofix® cross-linking technology for treatment of medium to deep facial rhytides. With its high elasticity (G') for stiffness and moderate to high yield stress, Contour™+ has optimal cohesivity and shape retention for seamless integration into the deep dermal matrix and subcutaneous, creating subtle lift and projection to patient profiles.

Concentrated excellence

Revanesse® Contour™+ contains greater HA concentration and has a higher viscosity than comparators.¹

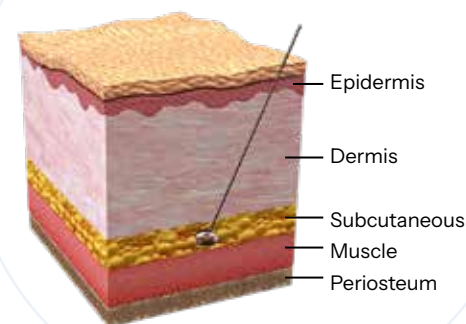

Minimal inflammation

Revanesse® Contour™+ is specially formulated to minimize natural inflammatory responses, such as pain and swelling.

Deep dermis
to subcutaneous*

*For thin-skinned patients.

Shape™+

Reshape their
perception.

TREAT:

- Lateral Cheeks
- Jawline
- Chin

Revanesse® Shape™+ is a high viscosity HA gel optimized with Thixofix® cross-linking technology for medium to deep facial rhytides, addressing aging at its source in the lateral cheeks.

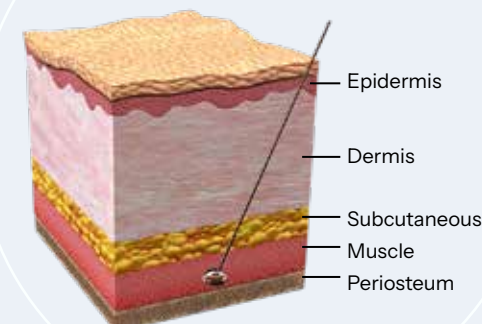

The artistry of being seen

As a smooth and very viscous gel, Shape™+ is ideal for correcting very deep tissue areas, adding shape and volume within the supra-periosteal plane.

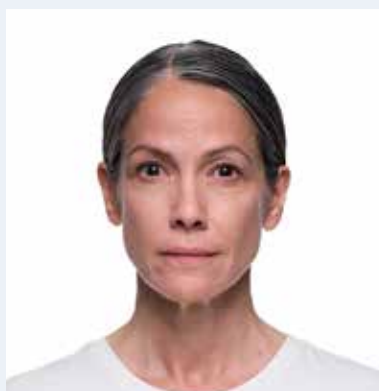

A dynamic answer to aging

Very high elasticity (G') provides lift and projection in the lateral cheek, while a high yield stress and optimal cohesivity ensure shape retention needed for natural, dynamic movement.

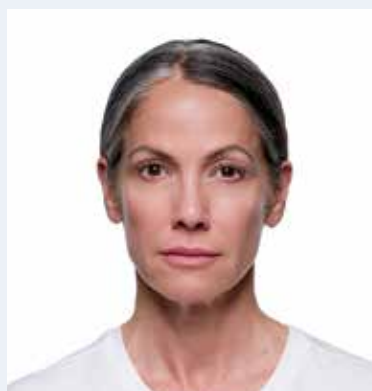

Supra-periosteum

Your studied approach. Their new confidence.

BEFORE

AFTER

JENNIFER WAS TREATED WITH:

- 1.2mL of Revanesse® Ultra™+ in her lips
- 2mL of Revanesse® Ultra™+ in her smile lines (nasolabial folds)
- 0.2mL of Revanesse® Ultra™+ in her mental crease
- 1.2mL of Revanesse® Shape™+ in each cheek

“With Revanesse,
I look like myself,
but better.”

— Jennifer

All patients were treated by
Dr. Marina Krasnopolsky, MD.

Unmatched safety. Unmissable artistry.

“I’ve been using these products for about
12 years now, and I haven’t seen one
single case of a delayed inflammatory
reaction. That’s pretty remarkable.”

Dr. Arthur Swift MD, FRCSC
Plastic Surgeon, Montreal, Canada

Prollenium, founded in 2002, developed Revanesse®, a Health Canada-approved line of state-of-the-art HA injectables designed for precision. With over 8.2 million syringes sold worldwide, Revanesse® has a proven safety record and is unmatched in patient satisfaction—reshaping the aesthetic experience in over 70 countries around the globe.

PACE

Prollenium Advanced Clinical Education

PN9552 REV00

→ **PACE Faculty**

At the heart of Prollenium's commitment to innovation and education stands an international faculty of experts — leading physicians and trainers advancing aesthetic medicine worldwide and shaping our global educational programs.

→ **Online platform**

Access a dynamic learning hub featuring interactive training modules, real-world case studies, and expert-curated resources.

→ **PACE presence at Congresses**

Join us at leading regional and international congresses where PACE experts share the latest insights and innovations.

→ **PACE Summit**

Experience Prollenium's immersive educational event, connecting global experts and peers in an engaging, hands-on learning environment.

→ **PACE Training**

Across all markets, we provide training programs that enhance product mastery and technique — empowering practitioners to deliver excellence everywhere.

→ **Partnership**

Collaboration with Harley Academy through the GEM (Global Evidence Matrix) initiative, PACE drives the advancement of evidence-based clinical practice worldwide.
